

# MARINE WINCH OPERATION GUIDE

**ATLANTIC**  
WINCHES

**IMPORTANT: It is the operators responsibility to determine the suitability of the equipment to its intended use. Check all applicable codes, caution and warning notations before using the product.**

**Keep your hands clear** of the webbing or cable and its opening during operation and/or when spooling.

**Do not** use any Atlantic Marine Winches for lifting applications. Refer to the range of Atlantic Brake Winches range.

Our winches are **not** intended to lift, lower or transfer people at any time.

**Alert** all people in close proximity before use of the winch.

**Keep** non-operating users away from the working area of the winch.

**Never** winch when there are less than 3 wraps of cable or webbing on the drum at all times.

**Winch out slowly and steadily.** Be sure that the cable or webbing is winding evenly and tightly around the drum at all times.

**Ensure** cables or webbing are secured correctly before use of the winch.

**Keep your clothing clear** of the webbing or cable and its opening during operation and/or when spooling.

**Regularly examine** all parts of the winch and do not use if damaged. Repair or replace any defective parts of the winch.

**Never disengage the clutch** while the cable or webbing is under tension.

**Never engage the clutch** while the drum is rotating.

**Never pull (vertically lift)** more than the capacity stated on the winch.

**Never** use a Marine Winch to tow another vehicle or used as a load securing device ie. (boat on a trailer).

**Never** apply a load on the winch with the cable or webbing in full extension. Ensure at least 3 full wraps of cable or webbing are on the drum at all times.

# BRAKE WINCH OPERATION GUIDE

**ATLANTIC**  
WINCHES

**IMPORTANT: It is the operators responsibility to determine the suitability of the equipment to its intended use. Check all applicable codes, caution and warning notations before using the product.**

**Keep your hands clear** of the cable, hook and its opening during operation and/or when spooling.

**Tighten the brake winch handle** adapter before use to ensure optimal braking ability.

**Never lift more** than the capacity stated on the brake winch.

**Ensure cable is secured** correctly before use of the brake winch.

**Never** winch when there are less than 3 wraps of cable on the drum at all times.

**Never apply a load** on the brake winch with the cable in full extension.

**Ensure** at least 3 full wraps of cable are on the drum at all times.

**Do not lift people or lift a load over people.** Alert all people in close proximity and keep non-operating users away from the working area before use of the brake winch.

**Keep your clothing clear** of the cable, hook and its opening during operation and/or when spooling.

**Regularly examine** all parts of the brake and do not use if damaged. Repair or replace any defective parts of the winch.

**Never disengage the clutch** while the cable is under tension.

**Never engage the clutch** while the drum is rotating.

**Never lubricate** (grease) the braking mechanism of the brake winch.

**Never wrap the cable** around a load as this will damage the cable.

**Do not swing the load** as this may cause damage.

**Never** leave a suspended load unattended.
